

School System Setup:

~ A Step-by-Step Guide ~

Foreword

Hey, hope this system meets your requirements and gets you good results at the system presentation and in the final documentation. In this document I will give you a detailed guide of how to set up your PC so as to ensure that the system is able to run at its best. If anything is unclear do reach out.

Step 1: Programs

- Below are the programs that you need to have on your PC, use the links to download and install them:

XAMPP (this will host the MYSQL server that is required for the database, be sure to check for a MAC OS Version if you have a MAC PC):

<https://www.apachefriends.org/download.html>

Sublime Text 3 (this will allow you to edit a few lines of code in order to ensure that the system works):

<https://www.sublimetext.com/3>

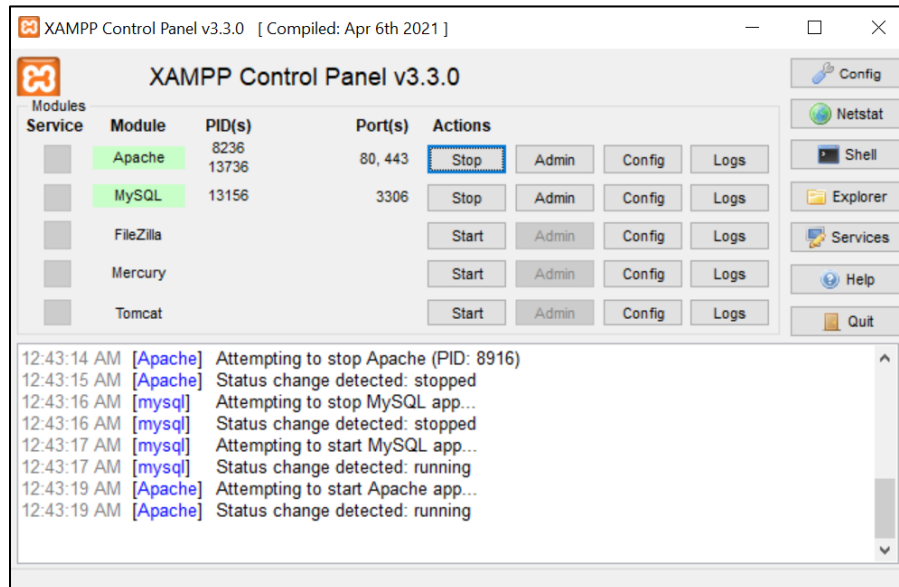

Composer, this is needed to install Laravel & its dependencies on your device:

<https://getcomposer.org/download/>

Node.js this is required to allow for some mitigations and functionalities:

<https://nodejs.org/en/download/>

- Once installed you need to open XAMPP Control Panel and turn on the following, Apache (for PHP) and the MYSQL Server:

Step 2: System Set-Up

- Use the video that came along with this PDF to guide you on the system set-up.
